PROJECTS

Django Based Healthcare Appointment Booking System with PRMS

- Provides an online platform for booking appointments across various healthcare departments.
- Includes access to specialized doctors such as psychologists, eye care experts, dentists, and more.
- Allows patients to schedule diagnostic services like CT scans, MRIs, and blood tests.
- Maintains detailed patient records, including past visits, allergy information, and current medications, all managed by doctors.

MERN Stack Based Experience Listing Website

- Displays complete experience details including title, description, host, location, date, duration, group size, and images.
- Allows users to filter and browse experiences by category, language, and availability with smooth navigation.
- Includes real-time availability updates and a secure reservation process.
- Supports interactive features such as host information, included amenities, and multi-image gallery view.
